Sample Mid-Term Exam 1

CS 5510, Fall 2009

September 18

Instructions: You have fifty minutes to complete this open-book, open-note, closed-computer exam. Please write all answers in the provided space, plus the back of the exam if necessary.

1) Given the following grammar:

```
\begin{array}{lll} \langle weed \rangle & = & \text{'leaf} \\ & | & (\text{list 'branch } \langle weed \rangle \ \langle weed \rangle) \\ & | & (\text{list 'stem } \langle weed \rangle) \end{array}
```

Which of the following expressions are examples of $\langle \text{weed} \rangle$?

- a) (list 'leaf)
- b) (list 'stem)
- c) (list 'branch (list 'branch 'leaf 'leaf) 'leaf)
- d) (list 'stem 'leaf)
- 2) Explain why the following is a \(\text{weed} \):

```
(list 'branch (list 'stem 'leaf) (list 'branch 'leaf 'leaf))
```

3)	Provide a define-type declaration for Weed that is a suitable representation for $\langle weed \rangle s$.
4)	Implement the function $\mathtt{weed-forks}$, takes a $\langle \mathtt{weed} \rangle$ and returns the number of branches that it contains. Your implementation must follow the shape of the data definition.

5) Given the following expression in the book language with with and fun:

- a) Draw arrows on the above expression from each bound variable to its binding occurrence.
- b) List the free variables:

and bound variables:

6) Given the following expression:

```
{with {g {fun {x} {fun {y} {+ y x}}}}
    {with {x 13}
        {with {f {g 6}}
        {f x}}}
```

Describe a trace of the evaluation in terms of arguments to an interp function for every call. (There will be 16 calls.) The interp function takes two arguments — an expression and a deferred substitution — so show both for each call. For number, variable, and fun expressions, show the result value, which is immediate. Use the back of the exam for additional space, and use the following abbreviations to save time:

```
\begin{array}{lll} E_0 & = & \text{the whole expression} \\ E_1 & = & \{\text{fun } \{x\} \; \{\text{fun } \{y\} \; \{+\; y\; x\}\}\} \\ E_2 & = & \{\text{with } \{x\; 13\} \; \{\text{with } \{\text{f } \{\text{g } 6\}\} \; \{\text{f } x\}\}\} \\ E_3 & = & \{\text{with } \{\text{f } \{\text{g } 6\}\} \; \{\text{f } x\}\} \end{array}
```

Answers

- 1) (c) and (d)
- 2) Since 'leaf is a (weed) by line 1 of the definition, then by line 3, (list 'stem 'leaf) is a (weed), and by line 2, (list 'branch 'leaf 'leaf) is a (weed). Finally, then, by line 2 again, (list 'branch (list 'stem 'leaf) (list 'branch 'leaf 'leaf)) is a (weed).

```
3) (define-type Weed
     [leaf]
     [stem (rest Weed?)]
     [branch (left Weed?)
              (right Weed?)])
4); weed-forks: Weed -> num
   (define (weed-forks w)
     (type-case Weed w
      [leaf () 0]
      [stem (rest) (weed-forks rest)]
      [branch (l r) (+ 1
                         (weed-forks 1)
                         (weed-forks r))]))
   (test (weed-forks (leaf)) 0)
   (test (weed-forks (stem (leaf))) 0)
   (test (weed-forks (stem (branch (leaf) (leaf)))) 1)
   (test (weed-forks (branch (branch (leaf) (leaf)) (leaf))) 2)
5)
        {with {g {fun {z} {f z}}}}
           {with {f {fun {z} {g z}}}}
              {with {y {with {f {fun {z}} {f {+ z x}}}}}
                    -^ ,---^
                         (f y}}}
                \{+ y q\}\}\}
   Free: f, x, y, q Bound: z, g, f, y
6)
                expr
                             E_0
                             (mtSub)
                subs
                expr
                            |E_1|
                subs
                            (mtSub)
                            (closureV 'x \boxed{\{\texttt{fun }\{\texttt{y}\}\ \{\texttt{+ y x}\}\}} (mtSub)) = C_1
                result
                expr
```

 $\overline{\text{(aSub 'g } C_1 \text{ (mtSub))}} = S_1$
